Beyond ERP

Why | what | how | who | when ?

Because building an effective and adaptable MRO management capability, with strategic decisions driven by good data, is one of the best risk management steps your business can make.

Because your MRO activities, particularly inventory procurement and management, are some of the most complex business processes carried out within your organisation - and you need to understand them to retain control.

Because you are expected to know exactly what is going on in every corner of your organisation and have an up to date commanding view of the 'big picture' now matter how fragmented or complex your MRO information management systems - that's not easy.

Because getting it right can save your business huge sums through lowering total cost of asset ownership and just the thought of getting it wrong keeps you (and your competitors) awake.

Because you know that your MRO operations can improve and you particularly want to achieve the following:

- A fuller understanding of your continuously changing global MRO inventory position and supplier base.
- To pro-actively set and manage MRO inventory stock levels working as one integrated business not as a collection of disparate sites.
- Closer integration of your MRO inventory management objectives with those of Production and Maintenance.
- Knowledge of your risk exposure to suppliers.
- Better control of MRO data quality across your business.
- To minimise expensive waste attributable to excess inventory and lost production due to shortages.

“Managing over 50,000 line items on each of our sites and needing all stock levels set to ensure the right parts are in the right place at the right time for the right cost whilst satisfying a continuously changing service level – it’s difficult to know where to start!”

Why | **what** | how | who | when ?

In modern asset intensive businesses, day to day *operational* MRO activities are now very effectively managed through one or more ERP or EAM applications. But on their own these applications are often not enough.

MRO@analytics provide a secure portal for delivering the *strategic* MRO data tools your business also needs to carry out those critical tasks that are best conducted outside the ERP/EAM environment.

We operate a suite of web delivered supporting applications that, coupled with your regional ERP/EAMs, enable you to work right across your business to manage risk, reduce cost and drive up productivity.

For multi-site global businesses you can now begin to leverage your MRO data and start realising the economies of scale to gain competitive advantage.

Amongst the features **MRO@analytics** provides within its integrated configurable application suite are:

- Risk based stock level analysis tools
- Multi-site inventory pooling support
- Material master management
- Global supplier/equipment risk reporting
- Global MRO stock oversight
- Inventory spend analysis
- Maintenance strategy development support
- Incident recording
- Through life inventory level planning
- MRO knowledge repository
- Investment recovery support

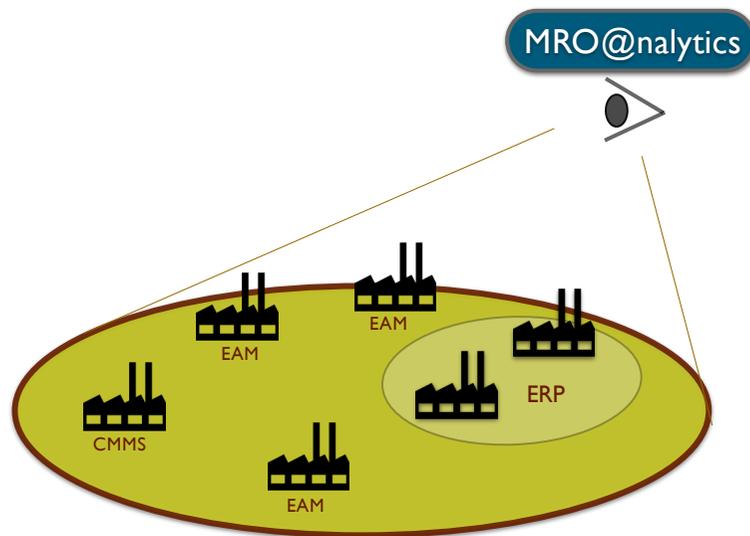

Why | what | **how** | who | when ?

Our focus is on allowing you to implement MRO business processes and tools that work well and can be rapidly and cost effectively deployed across your business worldwide.

We manage and deliver our MRO solutions so that you don't have to worry about them and can concentrate on what you do best.

Fundamentally we have to continuously aggregate, process and enhance the key data held in your many operational MRO data systems globally in order to analyse it and provide you with the information that really matters.

Some of our key technology features include:

Built for mobile working - tablet PCs mean that managers can be out there making and driving forward business decisions confident they are backed up by insightful data.

Big data - Handling large volumes of continuously changing MRO data sourced from your various ERP/EAM systems is not trivial. - we do it right.

Inspired Displays - Clearly conveying the insights delivered by our analytic work to your peers is essential for making your business case. We continuously seek innovative new methods of displaying complex data.

Secure access anywhere - browser deployed over the web - matches the way you work. SaaS - the cost effective way of delivering your non core applications.

Tailored flexible delivery - because no two businesses are identical. We thrive on building solutions to complex MRO business problems.

Distributed team support - To be effective in a dynamic working environment we design from the outset to support distributed team working across multiple sites with workflow and replication to rapidly promulgate benefits established at one site across your organisation.

Why | what | how | **who** | when ?

MRO management activities, particularly inventory related ones, can involve many individuals and systems both within and outside your organisation and cross many functional lines. These include:

- Procurement
- Stores
- Maintenance
- Production
- Finance
- Asset Recovery
- IT
- Finance
- Risk Management

If you have responsibilities that involve some or all of these functions, especially corporate wide, then **MRO@analytics** can help you in your role.

“The one thing your business can’t manufacture is time”

...and wasted time means wasted business opportunity. Furthermore, failing to identify, quantify and manage MRO related risk exposes you to sudden and potentially catastrophic future consequences.

MRO@analytics delivers immediate business benefit which increases with wider and fuller implementation across your organisation.

So the answer to the question “When ?” is how about starting **right now**.

MRO@analytics
Risk. Managed.
